Overview

STarFix™ platforms enable the accurate placement of one or more devices or instruments within the brain. Patient-specific models are available for use in many common types of cranial neurosurgery procedures, including deep brain stimulation, stereoelectroencephalography, and laser ablation.

For the patient, the STarFix platforms allow for faster procedures than with traditional stereotactic frames, which grants the patient increased freedom of movement, improving patient comfort during lengthy procedures.

For the surgeon, the STarFix Platforms are easy to use and have proven to be as or more accurate than a traditional stereotactic frame*, minimizing possible error in frame setup. Placing the platform is fast, with the surgical planning step being removed from the OR for the surgeon’s convenience.

*References available upon request

For the hospital, use of the STarFix Platform minimizes upfront capital investment in traditional stereotactic frames and can shorten operating room time. STarFix platforms are single-use and fabricated for each patient and procedure.

Key features and benefits of STarFix platforms include:

- **Time-Saving Design**: Single-use, patient-specific stereotactic platform for maximum efficiency in the OR
- **Advanced Planning Tools**: Integrated preoperative planning, intraoperative navigation, and postoperative reporting with WayPoint™ Navigator
- **Patient-specific and Collaborative**: STarFix Platform models designed for deep brain stimulation, stereoelectroencephalography, and laser ablation workflows
#### System Components

--- Platforms for DBS ---

**3-Leg Unilateral Platform**

Required Parts:
- 3 WayPoint Anchors
- 3 20mm SS Thumbknobs with Standoff

**4-Leg Unilateral Platform**

Required Parts:
- 4 WayPoint Anchors
- 4 20mm SS Thumbknobs with Standoff

**Bilateral Platform**

Required Parts:
- 6 WayPoint Anchors
- 5 20mm SS Thumbknobs with Standoff

**Microtable Platform**

The Microtable utilizes STarFix technology to create a pre-configured patient specific platform. Each unilateral Microtable is verified using the same time-tested techniques as normal microTargeting platforms, allowing the Microtable to achieve the same sub-millimetric accuracy.
Platforms for Epilepsy

**Multi-Oblique Epilepsy Platform**
Required Parts:
- Appropriate number of WayPoint Anchors
- Appropriate number of 20mm SS Thumbknobs with Standoff

**Monteris Platform**
Required Parts:
- Appropriate number of WayPoint Anchors
- Appropriate number of 20mm SS Thumbknobs with Standoff

**Single Trajectory Platform***
Required Parts:
- Appropriate number of WayPoint Anchors
- Appropriate number of 20mm SS Thumbknobs with Standoff

**Dual Trajectory Platform***
Required Parts:
- Appropriate number of WayPoint Anchors
- Appropriate number of 20mm SS Thumbknobs with Standoff

*Compatible with Neuropace and Visuolase solutions
Kit Components

WayPoint Disposable Implantation Kit

WayPoint Reusable Implant Kit

* 5mm Anchors and Pilot Drill Bit are not reusable they are single use for a single patient. Both sold separately.
WayPoint Disposable Surgical Kit

Center Positioner  3mm Offset Positioner  Standard Mounting Hub  3mm Entry Offset Mounting Hub  6mm Target Offset Mounting Hub

Burr Hole Driver

Combo Driver

Anchor Wrench

Standoffs

Thumbknobs

Standoff Wrench

WayPoint Disposable Bilateral Kit

Center Positioner  3mm Offset Positioner  Standard Mounting Hub  3mm Entry Offset Mounting Hub  6mm Target Offset Mounting Hub
MR Lead Insertion Tube Components and Setup

SLS Components (part numbers 66-WP-ID-01 and 66-WP-ID-02) include:
1. Inserter
2. Lead Holder
3. Thumbknobs
4. Lead Measurement Fixture
5. Drape Support

Accessories Sold Separately:
6. 66-MP-EM / Burr Hole Marker
7. 66-WP-SW / Standoff Wrench
8. 66-WP-HW / Hex Wrench
9. 66-WP-DH / Manual Handle
10. 66-WP-CD-01 / Combination Driver
11. 66-MP-EM / Burr Hole Marker Bushing
12. 70-FA-SF-01 / STar SteriSuite Case
13. 67-00-1 / Sterilization Tray

Additionally required for use:
- 66-WP-SKS / WayPoint Disposable Surgical Kit
- 66-AC-DC / LeadLoc
- 66-IT-MR1 or 66-IT-MR3 / MR Lead Insertion Tube
MR Lead Insertion Tube Components and Setup

STarFix Platform Adapter Kit
FHC’s WayPoint Navigator is a dynamic stereotactic planning and guidance system that offers patient specific procedures for individuals with neurodegenerative disorders. The system is used to accurately position tools used for deep brain stimulation (DBS), stereoelectroencephalography (SEEG), and laser interstitial thermal therapy (LITT).
A seven day cycle is routine for most platform users, however, anchor implants and trajectory planning can be done up to 28 days before surgery offering flexibility for the surgeon and patient.

**Platform planning using WayPoint Navigator Software:**

1. Merge CT and MR scans
2. Locate anchors
3. Identify AC/PC
4. Select targets and entry points
5. Select platform from library
6. View 3-D model
7. Pack and upload files to FHC’s secure FTP website
Sterilization and Scanning

This document provides best practices and is not intended to replace the referring surgeon's specific instructions.

- The target area may be 100 slices or more from the area of the anchors at the top of the head, and the anchors may be 25 or more slices from each other. Motionless scans are required for targeting accuracy; therefore, the patient must be still during the entire imaging process.
- The scanner technician should always check the quality of the scan images for displaced slices indicating movement.

Recommended Scan protocols

| CT | Whole head  
|    | Slices ≤1.25 mm thick  
|    | No gantry angle  
|    | Contiguous slices with equal spacing |
| Axial T1 MRI | Whole head  
|    | Slices ≤1 mm thick  
|    | No gantry angle  
|    | Contiguous slices with equal spacing (up to 2mm can be used but can effect accuracy of Atlas) |
| Axial T2 MRI | Whole head  
|    | Slices 1-2 mm thick  
|    | Flared, if desired encompassing target area*  
|    | No gantry angle |

*Confirm target location with surgeon prior to T2 scan. (Targeting the STN, GPi, or VIM may require scans from the lower part of the ear to the middle of forehead.)

Patient Preparation

- Align the patient’s head axially in the scanner, to ensure a gantry angle of zero.
- Secure the patient's head to the headrest with tape. Towels may be used to pad the head and to help prevent movement. Be careful not to disturb the anchors/headframe bars.
- Secure the patient’s arms and use pillows or restraints on other parts of the body to make the patient comfortable and relaxed, and to limit movement.
- Inform the patient of the importance of holding still, as the accuracy of the procedure depends on a good scan. The surgeon may recommend light sedation if needed.

Scanning Requirements

- Single Pass, Slice by slice; or  
- Single spiral image acquisition

**STarFix™ Platform** CT scan should start 2.5cm above the anchors and end 2.5cm past the target. (The extra space on the top and bottom ensures there is no distortion and allows the search algorithm to work.)

**Frame** CT scan needs to start just below the top ring of the frame and end just above the bottom ring of the frame. This will prevent artifact from impeding the registration of the CT and MRI.

**Field of view** should include the entire head, but should not be too large. Standard stereotactic frame head protocols are often too large, causing unnecessary time in the scanner, large scan files, and tissue discrimination.
Scanning Requirements

1. With patient present, prepare a 3-D reconstruction of the scans and inspect quality. Streaking, blurring, and rotated slices will require a re-scan of the patient.
2. Ensure the titanium anchor/frame bars are plainly visible and stand out from the bone by setting up the CT for best anchor/frame visibility.

Scan Storage

- Prepare the digital image data in uncompressed DICOM format according to the surgeon's instructions. (Do not use jpg or bmp formats.)
- Store scans on a CD-R, CD-RW, or DVD. Do not use Magneto Optical Disks.
- CT and MRI scans must be loaded in one folder (not in multiple folders with smaller scan sections).
- Disk should be given to the surgeon as soon as possible to allow for planning.

Non-clinical testing demonstrated that the WayPoint Anchor is MR-Conditional. A patient with this device can be scanned safely immediately after placement under the following conditions:

Static magnetic Field
- Static magnetic field of 3-Tesla or less
- Maximum spatial gradient magnetic field 720-Gauss/cm or less

MRI-Related Heating

In non-clinical testing, the WayPoint Anchor produced the following temperature rise during MRI preformed for 15min of scanning (i.e., per pulse sequence) in the 3-Tesla (3-Tesla/128-MHz, Excite, HDx, Software 14X.M5, General Electric Healthcare, Milwaukee, Wi) MR system:

**WayPoint Anchor MRI Information**

The WayPoint Anchor was determined to be MR-conditional according to the terminology specified in the Highest temperature change +1.5°C

Artifact Information

MR image quality may be compromised if the area of interest is in the exact same area or relatively close to the position of the WayPoint Anchor. Therefore, optimization of MR imaging parameters to compensate for the presence of this device may be necessary.

Forty-nine parallel trajectories available using center hub and positioners.

Anterior (A)
**Center Hub, Center Positioner**

Five parallel trajectories available

---

**Center Hub, Center Positioner Rotated**

Rotate positioner to access four alternative parallel trajectories
Center Hub, 3mm Offset Positioner

Five parallel trajectories available at 3mm offsets from center array

Center Hub, 3mm Offset Positioner

Rotate positioner to access thirty-five alternative parallel trajectories
